Observed correspondence with RIAS VIX, WAIS FSIQ and VIQ

This figure graphically illustrates the correspondence between the Cerebrals Cognitive Ability Tests (CCAT) Crystallized Educational Index (CEI) and the Verbal Index (VIX) of the Reynolds Intellectual Assessment Scale and both the Full Scale IQ (FSIQ) and Verbal IQ (VIQ) of the Wechsler Adult Intelligence Scale. The sample gathers 160 examinees of ages 14:8 to 69:1 years. Unrestricted range correlation is .85 (p<.05).
